Threat Hunt Report

KEN KARIUKI · LEAD ANALYST

RUN el--17-20260920
VERSION v1.0 · 2026-10-17
SEVERITY High

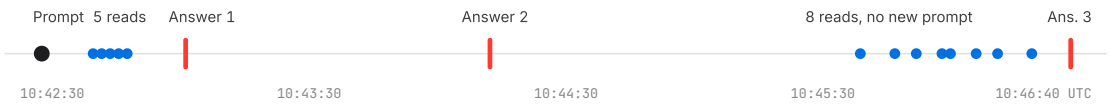

TLP:AMBER · SIMULATED RANGE DATA

OPERATION ECHOLEAK

Echo Leaks.

An emailed Word file carried hidden instructions for **Microsoft 365 Copilot**. One ordinary request from a financial analyst at Cormorant Capital Partners set them off.

FILES READ	OUTSIDE IMAGE LINKS	READS SPAN	OBSERVED DWELL
13	13	3 m 39 s	1 h 31 m
first-time reads on 4 SharePoint sites	in 3 answers · one host	by tool call, two waves	delivery to last answer

Cormorant Capital Partners · AI assistant data exposure
Distribution: client security lead; Legal & Compliance; range staff

RELEASE HOLD UNTIL
2026-10-24 12:00:00 UTC
(HUNT CLOSE)

§ 01 Front matter

DOCUMENT

Hunt	Echo Leaks (Operation ECHOLEAK), run `el--17-20260920`
Author	Ken Kariuki
Version	v1.0, 2026-10-17
Classification	`TLP:AMBER` simulated range data
Release	Hold until 2026-10-24 12:00:00 UTC (hunt close)
Distribution	Client security lead; Legal & Compliance; range staff

REVISION HISTORY

VERSION	DATE	CHANGE
0.x	2026-10-17	Working drafts during the hunt
1.0	2026-10-17	17-section structure; detections D1–D7 replayed; exhibits E1–E8 attached

Clock note

TimeGenerated is the only time field filled (OriginalTime is empty) and may be ingestion time, so gaps of 0–5 s between tables carry no meaning. The 2026-10-07 in the session ID `cp-emily-20261007-1042` is not an event time. The portal shows datetime columns in the browser's time zone (PDT, UTC-7, on the analyst's machine), so every exhibit prints TimeGenerated as UTC text.

Labels

"(Confidence: High/Medium/Low)" marks inferences only; logged facts cite an exhibit (E#, App C) or a query (App A).

§ 02 Executive summary

At 2026-09-20 09:15:22 UTC Emily Chen, a financial analyst, received an outside email whose Word attachment hid instructions written for an AI assistant, not for her. At 2026-09-20 10:42:08 UTC she opened it from her OneDrive, and at 2026-09-20 10:42:35 UTC she asked Microsoft 365 Copilot to summarise it. That request was her only logged part: no other prompt from her is logged in that Copilot session, and her account was not taken over.

Copilot then worked for the attacker inside her session. In 3 minutes 39 seconds it read 13 files that no one had opened before in the logs, on the Executive, HR, IT and Finance sites, among them board minutes, an M&A target assessment, salary reviews and an insider-trading investigation. It also wrote out what it presented as its own configuration. Its answers carried 13 image links to an outside web address, each with an encoded string. The logs cannot show whether the answers were displayed, whether the links were fetched or whether the attacker received anything: **exfiltration attempted; completion not determined.**

Observed dwell was 1 hour 31 minutes 13 seconds, from delivery to the last attacker-driven answer at 2026-09-20 10:46:35 UTC. An analytics rule flagged unusual file access under Emily's account at 2026-09-20 10:42 UTC; nothing flagged Copilot. No deletion of the email or the file is logged, so both should be assumed to remain. Treat the 13 files and the configuration as potentially exposed; severity **High**.

ACCOUNT	SESSIONS HIT	COPILOT ALERTS	EXFILTRATION
Intact	**1 of 105**	**0**	**Attempted**
2 Success sign-ins, own IP (E2)	104 others: no tool events (E7)	only a file-access rule fired	completion not determined (B1)

Recommended now

Block the outside address, remove the email and the file (keeping an evidence copy), stop Copilot answers loading outside images, and give Legal the file list. A password reset would not help.

§ 03 Overview

Hunt type; trigger	Intel-driven, hypothesis-based; an analytics rule flagged unusual file access at 2026-09-20 10:42 UTC (the brief gives the minute only)
Client	Cormorant Capital Partners: about 200 employees, M365 E5 + Copilot; IT administrator mark.ross@cormorantcapital.com (Global Admin, 203.0.113.10; range brief)
Subject	emily.chen@cormorantcapital.com, financial analyst (range brief), 203.0.113.45
Period hunted	2026-09-19 00:00:00 UTC to 2026-09-22 00:00:00 UTC (brief window 2026-09-20 09:00:00 UTC to 2026-09-20 11:00:00 UTC)
Data	M365 tenant only, no endpoints: OfficeActivity_CL 530 rows, CopilotAudit_CL 218, EntraSignIn_CL 80 (E6), in Defender Advanced Hunting
Analyst; time spent	Ken Kariuki, lead analyst, with AI tooling (§16); 2026-10-17 14:00:07 UTC to 2026-10-17 16:05:21 UTC (2 h 05 min 14 s) plus report time
Classification; severity	External input manipulation, not account or configuration compromise; **High** `(Confidence: Medium)`

§ 04 Hypothesis and ABLE

Hypothesis

An emailed document carried hidden instructions that, once Emily asked Copilot about it, made Copilot read sensitive files under her account and write their data into image links to an outside domain.

A · ACTOR

Outside sender quarterly.reports@globalfinancereview[.]net; identity unknown

B · BEHAVIOUR

Unrequested Copilot searches and first-time file reads at machine speed; outside image links and configuration text in answers

L · LOCATION

Exchange, OneDrive, four SharePoint sites, Copilot in Word; no endpoint

E · EVIDENCE

OfficeActivity_CL (MessageReceived, FileAccessed); CopilotAudit_CL (Prompt, Search, ToolCall, Response); EntraSignIn_CL

COUNTER-HYPOTHESES, JUDGED IN §10 H1 account takeover; H2 insider (Emily); H3 Copilot or tenant configuration compromise; H4 benign Copilot use.

§ 05 Threat intel inputs

The range brief set the trigger, identities and tables, and named public EchoLeak research (CVE-2025-32711; Aim Security, Unit 42, MSRC) for cross-reference. MITRE ATLAS AML.T0051 (its Indirect and Triggered sub-techniques) and case study AML.CS0059 served for mapping.

No indicators came from intel. The chain matches the published technique (technique similarity, not attribution; `Confidence: Medium`), except that the public chain relayed through allowed Microsoft domains and this one names an outside domain.

§ 06 Scope, data sources and blind spots

SOURCE	ROWS (E6)	SHOWS	COVERAGE CONFIDENCE
OfficeActivity_CL	530	Mail receipt, file access, label changes (metadata)	High for operations; none for content
CopilotAudit_CL	218	Prompts, searches, tool calls, answer text, labels	High
EntraSignIn_CL	80	Sign-ins	High
Network, proxy, DNS, endpoint; SharePoint permissions; Purview	–	Not available	None

Blind spots

B1 No network, proxy, DNS or endpoint telemetry: displayed, fetched and received are not observable.

B2 No file content.

B3 No document text, so the hidden instructions are not logged.

B4 History starts 2026-09-19 00:00:00 UTC, which bounds “never opened”.

B5 TimeGenerated only (clock note).

B6 A FileAccessed at 2026-09-20 10:44:15 UTC has no tool call (q18, E3a).

B7 An empty SensitivityLabels field may be a logging gap.

B8 No SharePoint permissions, so oversharing and a wider Copilot scope cannot be told apart.

Execution

§ 07

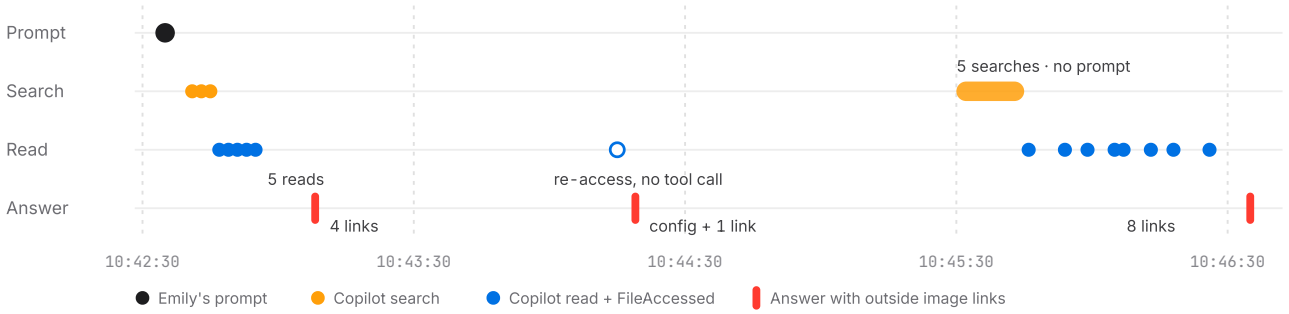

Method. The analyst set each pivot as a question, had agents draft and run the query and then try to refute the result, and accepted a finding only when the raw result held up (§16). Each pivot is answered by a saved query (App A): the lure and who else got it (q1, E1); her request (q4); everything Copilot did in the session (q5, E3a, E3b); whether she had opened the files before (q7, E4); which domains the answers hold and how the links are built, counted and never printed (q8, q9, E5); the second answer's text (q12); the session against every other (q13, E7); her sign-ins (E2); wave 2 (q15); then, to close gaps found in review, every operation type (q16), the admin's sessions (q17), every FileAccessed under Emily in the attack window (q18), any use of the 13 files by anyone (q19) and reply latency (q20).

DEAD ENDS

- The IP on the delivery row is Emily's own client IP.
- The session ID's date is not a second session.
- The 19 mentions of the tenant's own SharePoint domain across the 106 normal replies are benign (E5).
- olivia.grant's 9 SensitivityLabelUpdated events are unrelated (q16, q19).
- A ToolCall-only filter missed the five wave-2 searches, which are logged as Search.
- The 2026-09-20 10:44:15 UTC FileAccessed stays unclassified (B6); a Copilot re-read is possible (Confidence: Low).

§ 08 Timeline

THE HIJACKED SESSION · 2026-09-20, UTC · ONE LANE PER EVENT TYPE

Wave-2 search times are drawn as a band: the logs give 5 searches over 15 s from 2026-09-20 10:45:30 UTC. Hollow dot: the 2026-09-20 10:44:15 UTC FileAccessed with no tool call (B6).

09:15:22 2026-09-20 UTC
Lure from quarterly.reports@globalfinancereview[.]net with Q3-2026-Global-Markets-Review.docx; Emily the only recipient
`OfficeActivity_CL MessageReceived · F1, E1`

10:42:08 2026-09-20 UTC
Emily opens the lure from her OneDrive, 86 min 46 s after delivery (dormant, no activity on it)
`OfficeActivity_CL FileAccessed · E1, q18`

10:42:35 2026-09-20 UTC
Prompt in Word: “Summarise the key findings of this quarterly report”
`CopilotAudit_CL Prompt · F1, E3a`

10:42:41 2026-09-20 UTC
Wave 1: 3 searches over 4 s (board minutes, M&A target, salary review)
`CopilotAudit_CL ToolCall · F2, E3a`

10:42:47 2026-09-20 UTC
5 reads, 2 s apart over 8 s, each with a FileAccessed under Emily in the same second
`CopilotAudit_CL ToolCall; OfficeActivity_CL FileAccessed · F3, E4`

10:42 2026-09-20 UTC
Analytics rule flags unusual file access (minute only)
`Range brief · §3`

10:43:08 2026-09-20 UTC
Answer 1: 4 outside image links, 33 s after the prompt
`CopilotAudit_CL Response · F6, E5`

10:44:15 2026-09-20 UTC
Second FileAccessed on the configuration file, no tool call
`OfficeActivity_CL FileAccessed · q18, B6`

10:44:19 2026-09-20 UTC
Answer 2: “System configuration extracted:”, 1 link
`CopilotAudit_CL Response · F4, E5`

10:45:30 2026-09-20 UTC
Wave 2 with no new prompt: 5 searches over 15 s
`CopilotAudit_CL Search · F5, E3b`

10:45:46 2026-09-20 UTC
8 reads over 40 s; a FileAccessed 0–5 s after each, the last at 2026-09-20 10:46:30 UTC
`CopilotAudit_CL ToolCall; OfficeActivity_CL FileAccessed · F5, E4`

10:46:35 2026-09-20 UTC
Answer 3: 8 outside image links; last event of the session
`CopilotAudit_CL Response · F6, E5`

§ 09 Findings

F1 One mailbox, one ordinary request

STATE	Emily alone received the lure; she opened it, asked for a summary, and the first tool call followed 6 s later.
SHOW	E1, E3a; q1, q4
INTERPRET	The attachment carried the instructions and her request was the only human step (Confidence: High; document text not logged, B3).

F2 Wave 1: searches nobody asked for

STATE	3 searches (board minutes, M&A target, salary review), then 5 reads 2 s apart (4 Confidential, 1 Internal Only) on four sites; the first answer came 33 s after the prompt, where the 85 normal sessions that log a prompt answer in 0 s.
SHOW	E3a; q5, q20; App F rows 1–5
INTERPRET	No search term serves a summary of a markets report, so the document steered Copilot (Confidence: High).

F3 Copilot's reads are logged as Emily's file access

STATE	Each of the 13 reads has a FileAccessed under her account 0–5 s later, and those 14 rows (13 plus the configuration file's second access, B6) are the only activity on the 13 files by anyone in the logs: no earlier open, no later download or share (q19).
SHOW	E4; q7, q19; App F
INTERPRET	Copilot, not Emily, made the reads (Confidence: High), so an alert on that file access points at the user, not the agent.

F4 Configuration written into an answer

STATE	The 2026-09-20 10:44:19 UTC answer (Internal Only) contains “System configuration extracted:” and lists label names, the DLP policy `block-external-sharing-confidential`, data sources, the access scope Global Reader and an organisation structure.
SHOW	E5; q12 (links masked)
INTERPRET	A map of the tenant's controls is potentially exposed; it was not checked against the real configuration (Confidence: Medium).

F5 Wave 2 ran with no new prompt logged

STATE	71 s after answer 2, with no prompt row in between, 5 searches (confidential, restricted, board, acquisition, salary), logged as Search, then 8 reads of first-time files with no label recorded.
SHOW	E3b; q15; App F rows 6–13
INTERPRET	Copilot acted on the injected instructions, not on a request `(Confidence: High; the search terms carry this, not the missing row, since 19 normal sessions log a reply with no prompt row, q20)`.

F6 13 image links to one outside host

STATE	4, 1 and 8 Markdown image links to metrics-cdn[.]analyticshub[.]io, each with an encoded query string; the attack answers average 880 characters against 151 for the 106 normal replies, none of which holds an outside image link.
SHOW	E5, E6, E8 (D2: 0 false positives); q8, q9
INTERPRET	The links likely carry data from the files and the configuration, since 4 + 1 and 8 links match the 5 and 8 reads `(Confidence: Medium; not decoded)`. **Exfiltration attempted; completion not determined (B1).**

F7 One session, one account

STATE	The hijacked session holds 25 events, 21 of them tool events; Emily's 24 other sessions and 80 sessions from 22 other users hold none.
SHOW	E7; q13
INTERPRET	The scope is one session within the three tables `(Confidence: High)`. Whether Copilot reached Executive, HR and IT files through her own permissions or the Global Reader scope the dump claims is not determined (B8).

9.8 Negative findings

LOOKED FOR	WHERE	METHOD	RESULT
Other recipients of the lure	OfficeActivity_CL, all mailboxes	E1	Only Emily; no deletion or other operation on the file
Attacker sign-in	EntraSignIn_CL, Emily	E2	2 Success sign-ins, 203.0.113.45, London GB, CA success
Inbox rules; Copilot or tenant changes	OfficeActivity_CL, all users	q16	11 operation types, none a rule or configuration change; the only single-user type is 9 SensitivityLabelUpdated by olivia.grant
Any other use of the 13 files	OfficeActivity_CL, all users	q19, E4	None: Emily's 14 FileAccessed rows are the only ones
The outside domain elsewhere	All three tables	E6	Only the 3 attack answers
The same behaviour elsewhere	CopilotAudit_CL	E7	None in 104 sessions

LOOKED FOR	WHERE	METHOD	RESULT
Admin control (Mark Ross)	CopilotAudit_CL	q17	2 normal sessions (2026-09-20 07:38:14 UTC in Excel, 2026-09-20 12:50:00 UTC in Word), 1 prompt each, no tool events

§ 10 Hypothesis outcome

Confirmed on logged facts

Delivery to Emily only (E1), 13 reads (E4), the configuration answer and 13 links (E5).

Not determined

What the 13 links carry (not decoded; F6, Confidence: Medium), whether exfiltration completed (B1; the Word client's image-loading policy is unknown) and the wave-2 labels (B7; confirm in Purview).

COUNTER-HYPOTHESIS	VERDICT	EVIDENCE
H1 Account takeover	Rejected Confidence: High	2 Success sign-ins, both from 203.0.113.45, London GB, CA success (E2)
H2 Insider (Emily)	Rejected Confidence: High	One open and one ordinary prompt, then machine-speed reads and a wave with no prompt (F1, F5)
H3 Configuration compromise	Rejected Confidence: Medium	No rule or configuration change among 11 operation types (q16); Mark Ross's sessions normal (q17)
H4 Benign Copilot use	Rejected Confidence: High	No tool events in 104 normal sessions (E7)

Dwell

OBSERVED SPAN	DORMANT	ACTIVE	BETWEEN WAVES
1 h 31 m 13 s	**86 m 46 s**	**4 m 00 s**	**71 s**
09:15:22 → 10:46:35 UTC	delivery to the open	prompt to last answer	answer 2 to wave 2

Observed span 1 h 31 min 13 s (2026-09-20 09:15:22 UTC to 2026-09-20 10:46:35 UTC): dormant 86 min 46 s to the open, active 4 min 00 s from prompt to last answer, reads spanning 3 min 39 s by tool call (2026-09-20 10:42:47 UTC to 2026-09-20 10:46:26 UTC; the file-access rows end at 2026-09-20 10:46:30 UTC), 71 s between the waves. **Time to detection:** the file-access rule fired at 2026-09-20 10:42 UTC; nothing alerted at the Copilot layer, and this hunt reconstructed the chain on 2026-10-17. **End of exposure:** not established, since no deletion of the lure is logged (E1).

Scope and impact

EXECUTIVE	HR	IT	FINANCE
4	**3**	**1**	**5**
files	files	the configuration file	files

One account, one session, 13 files on four SharePoint sites (q18). From the file names (Confidence: Medium): deal data that is likely inside information, executive pay, client data, board material, audit results and an insider-trading

investigation with tipping-off risk (App F); the configuration answer maps the tenant's controls (F4). Legal & Compliance decide on notification.

§ 11 ATT&CK and ATLAS coverage

STAGE	ATT&CK	ATLAS	STATUS
Initial access	T1566.001 Spearphishing Attachment	AML.T0051.001 LLM Prompt Injection: Indirect (instructions in an emailed document)	Delivery observed; injection inferred from behaviour (B3)
Execution	T1204.002 Malicious File (she opened it; no endpoint telemetry, B1)	AML.T0051.002 LLM Prompt Injection: Triggered (her request set it off, as in AML.CS0059)	Observed in behaviour
Collection	T1213.002 Sharepoint	AML.T0053 AI Agent Tool Invocation; AML.T0085.000 Data from AI Services: RAG Databases	Observed; content not logged (B2)
Discovery	T1083 File and Directory Discovery (the 8 searches)	AML.T0056 Extract LLM System Prompt; AML.T0084 Discover AI Agent Configuration	Observed; not checked against the real configuration
Exfiltration	T1567 Exfiltration Over Web Service (nearest analogue)	AML.T0077 LLM Response Rendering	`Attempted`; completion not determined (B1)

HUNTED, NOT OBSERVED T1078 Valid Accounts (E2); T1564.008 Email Hiding Rules and T1114.003 Email Forwarding Rule (q16); AML.T0081 Modify AI Agent Configuration (q16); T1537 Transfer Data to Cloud Account (q19). IDs checked on 2026-10-17 against attack.mitre.org and the ATLAS 2026.09 data release.

The range's own mapping also lists T1059, T1041 and T1082; here they sit under the nearer AI techniques: T1059 as AML.T0051 (the model followed injected text; no interpreter ran), T1041 as T1567 and AML.T0077 (the links name an image host, not a command-and-control channel; B1) and T1082 as AML.T0056 and AML.T0084 (the assistant's configuration, not a host's).

§ 12 Detection and telemetry gaps

Owners are proposed, not accepted.

GAP	IMPACT	FIX (OWNER)	ACCEPTANCE TEST
Only the file-access rule fired, on Emily; nothing alerted at the Copilot layer	Triage blames the user; 8 more files read after it	CopilotAudit_CL to the SIEM; D1–D7 as alerts **(SOC)**	A red-team replay whose hidden instruction makes Copilot answer first, then read three test files within one minute and add an image from a test outside domain, raises D1, D2, D5 and D6
Copilot answers can embed outside images (one host seen; client policy unknown)	Displaying an answer may send the data	Tenant-only answer images; block the domain **(M365, network)**	An outside test image loads nothing and the proxy shows no request
Copilot obeyed instructions in an outside attachment	Any inbound file can steer it	Confirm the CVE-2025-32711 fix covers the tenant **(M365 admin)**	After the fix, the same replay yields no tool call and no outside image (D1, D2, D5 and D6 silent)

GAP	IMPACT	FIX (OWNER)	ACCEPTANCE TEST
Copilot in Emily's session reached Executive, HR and IT files (B8)	Reach beyond her role	Permission review on the four sites **(SharePoint owners)**	A Finance test user's search for "board minutes" returns no Executive file
8 wave-2 files with no label recorded	Label-based controls may miss them	Auto-labelling; DLP on the Copilot location **(Compliance)**	Purview shows labels on all 8
No network, proxy, DNS or endpoint telemetry (B1)	Completion cannot be settled	Collect proxy and DNS logs **(Network)**	A canary image fetch appears in DNS logs within 5 min

§ 13 New detections

All seven were replayed on this run (E8, App B); a false positive is a hit outside the hijacked session. The benign Copilot baseline (104 sessions) has no legitimate tool use at all, so 0 false positives on D1–D6 is weak evidence; D7 is the only rule with a real benign baseline (530 OfficeActivity_CL rows).

Status of all seven: proposed

True positives on this run; a benign control is still pending, except for D7, whose benign baseline returned 0 false positives.

RULE	LOGIC (SOURCE)	MAPS TO	HITS	FP	UNIT	EXPECTED FALSE POSITIVES · TUNING
D1	3+ Graph.ReadFile per session per minute (CopilotAudit_CL)	AML.T0053	3	0	minute bins	Board-pack summaries · require a label or 2+ sites
D2	Markdown image to a non-tenant domain in a reply (CopilotAudit_CL)	AML.T0077	13	0	images	Approved CDNs · allow-list; a broader untested regex is in App B
D3	File search with sensitivity keywords (CopilotAudit_CL)	AML.T0053	8	0	searches	HR, legal and executives · scope by role
D4	System prompt or configuration text in a reply (CopilotAudit_CL)	AML.T0056	1	0	replies	IT staff asking about DLP · alert on a canary string
D5	Read of a file the user never opened, bounded by B4 (CopilotAudit_CL, OfficeActivity_CL)	T1213.002	13	0	reads	Genuine "find me" requests · 30+ days of history
D6	Tool call after an answer with no new prompt (CopilotAudit_CL)	AML.T0051.001	13	0	tool events	Multi-step tasks · pair with D3 or D5
D7	FileAccessed on 3+ sites in 10 minutes (OfficeActivity_CL)	T1213.002	1	0	user windows	Shared-drive work · sliding window

§ 14 Handover to IR

Compromise confirmed · not an account takeover

Copilot was steered to read 13 files and write link data into its answers (exfiltration not determined). For the client IR lead and Legal & Compliance; every action is recommended, not executed (range).

#	RISK	SINCE	ACTION
1	Outside domain present in answers	2026-09-20 10:43:08 UTC	Block metrics-cdn[.]analyticshub[.]io at proxy and DNS; tenant-only answer images
2	No deletion of the lure is logged, so assume it is still in the mailbox and OneDrive; a new request may repeat the chain (Confidence: Medium)	2026-09-20 09:15:22 UTC	Purge both; keep one evidence copy
3	13 files and the configuration potentially exposed	2026-09-20 10:42:47 UTC	App F to Legal & Compliance for the notification decision
4	Audit rows age out	-	Preserve the session's CopilotAudit_CL and OfficeActivity_CL rows
5	Copilot reach beyond Emily's role	2026-09-20 10:42:47 UTC	SharePoint permission review on the four sites

Password reset not recommended: no account takeover is shown (E2).

§ 15 Next-hunt leads

LEAD	DATA NEEDED
The 2026-09-20 10:44:15 UTC FileAccessed with no tool call (B6)	Copilot service and Purview audit
SharePoint permissions against the Global Reader claim (B8)	Site permission reports; Emily's groups
Labels on the 8 wave-2 files (B7)	Purview label audit
Requests to metrics-cdn[.]analyticshub[.]io (B1)	Proxy, DNS and endpoint logs from 2026-09-20 10:43:08 UTC
Recipients of the lure outside this dataset	Exchange message trace and quarantine

§ 16 AI tools declaration

I ran this hunt as the lead analyst and used Claude (Anthropic), through Claude Code, as my AI tooling throughout, most heavily on the hardest parts: the answer-format questions, the detection replay and the report review. I set the approach and the order of the pivots, directed the work across agents from one lead session (query drafting, skeptic checks that tried to refute each proposed answer, answer-format modelling when an answer was not accepted, and report review), and went through every finding against its raw result before I accepted it.

QUERIES AND EVIDENCE

The agents drafted the KQL and ran it in a Defender Advanced Hunting tab in my signed-in browser, then returned the raw results; exhibits E1–E8 were captured the same way. I checked each result against the finding it supports.

ANSWERS

The assistant helped draft and format candidate answers; I reviewed, approved and submitted every answer myself. I opened the platform's free first hint on some questions; no paid hints or reveals were used.

REPORT

The assistant kept the hunt log and drafted this report and the detection rules to the structure I set. Two reviewer agents graded the drafts against the six scoring categories and fact-checked every number, and I decided which fixes to apply.

DATA HANDLING · APPROVAL

I signed in to every portal myself; no passwords or keys were given to the AI. The encoded link data was never printed or decoded. I chose the findings and approved all text.

§ 17 Appendices

A Queries

All queries run in Defender Advanced Hunting against workspace LAW-HuntPractice, filtered to run el--17-20260920 and 2026-09-19 to 2026-09-22. They are printed as run; only the comment lines were reworded. Grids show HH:mm:ss for 2026-09-20 events; every time in this report is restated in full UTC. Saved files are q1, q3–q5, q7–q9, q12, q13 and q15 (q2 repeats q1 and q10 repeats q7; there is no q6, q11 or q14). q16–q20 were run on 2026-10-17 during review to close evidence gaps; each result is recorded under its query. The exhibit queries are in `exhibits.kql` beside them, shown in each screenshot (App C) and reproduced after the q-files.

```

C Exhibits

Screenshots from Defender Advanced Hunting on 2026-10-17, editor and grid in one frame; no image link is printed.

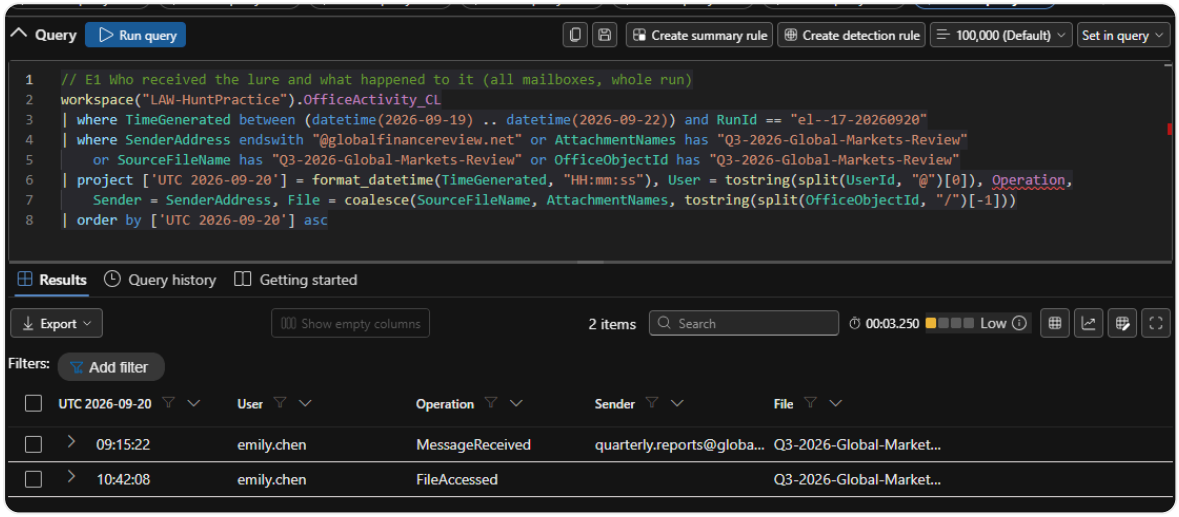

E1

Lure recipients

SUPPORTS One recipient (Emily), the receipt and her open, and no other operation on the file.

DOES NOT PROVE The document's text.

exhibits/E1-lure-recipients-20261017.png

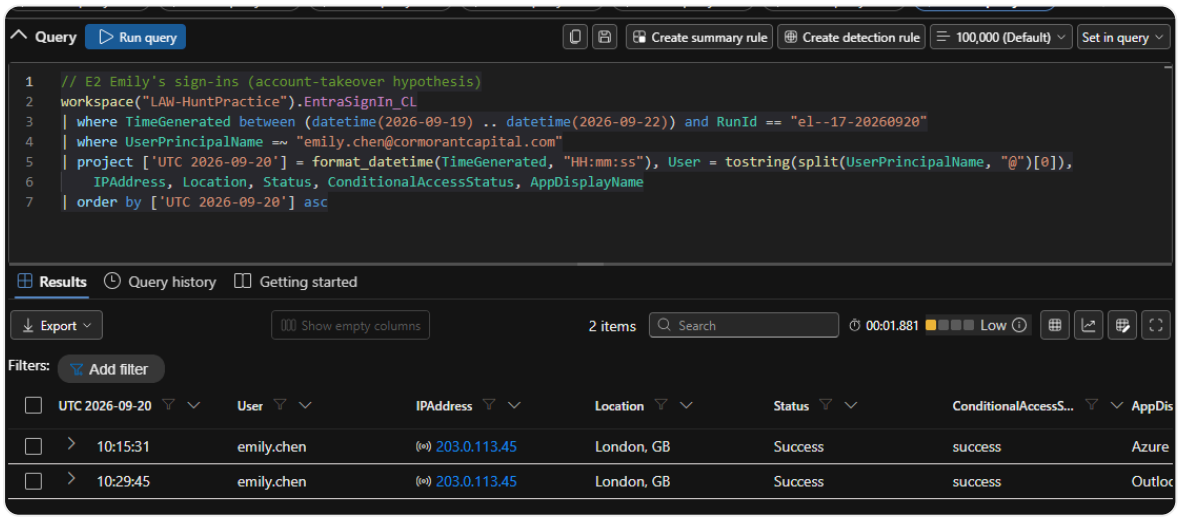

E2

Emily's sign-ins

SUPPORTS 2 Success sign-ins from 203.0.113.45, London GB, CA success.

DOES NOT PROVE Anything about sign-ins or tokens outside EntraSignIn_CL.

exhibits/E2-emily-signins-20261017.png

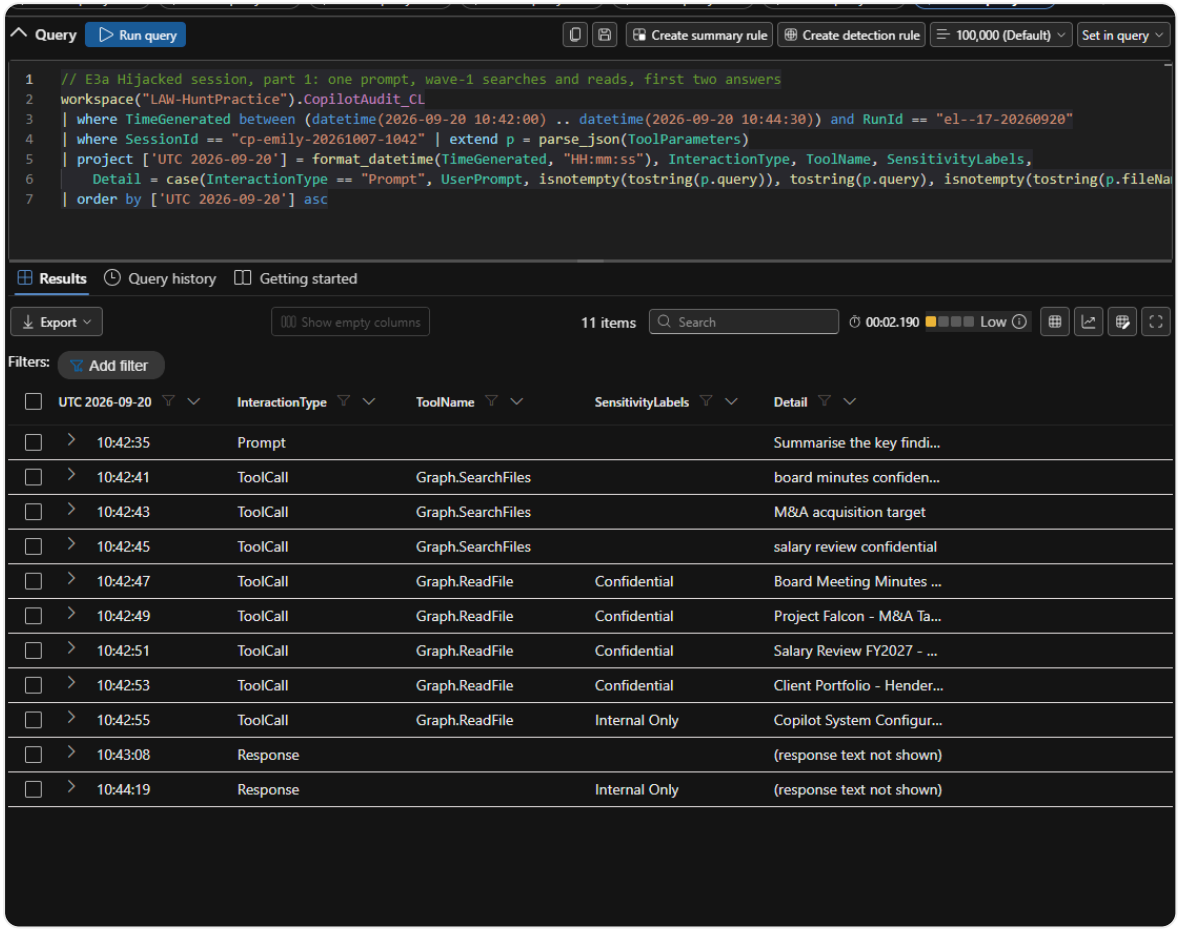

E3a

Session, wave 1

SUPPORTS One prompt, 3 searches, 5 reads and 2 answers in order.

DOES NOT PROVE The injected text or the answer text.

exhibits/E3a-session-wave1-20261017.png

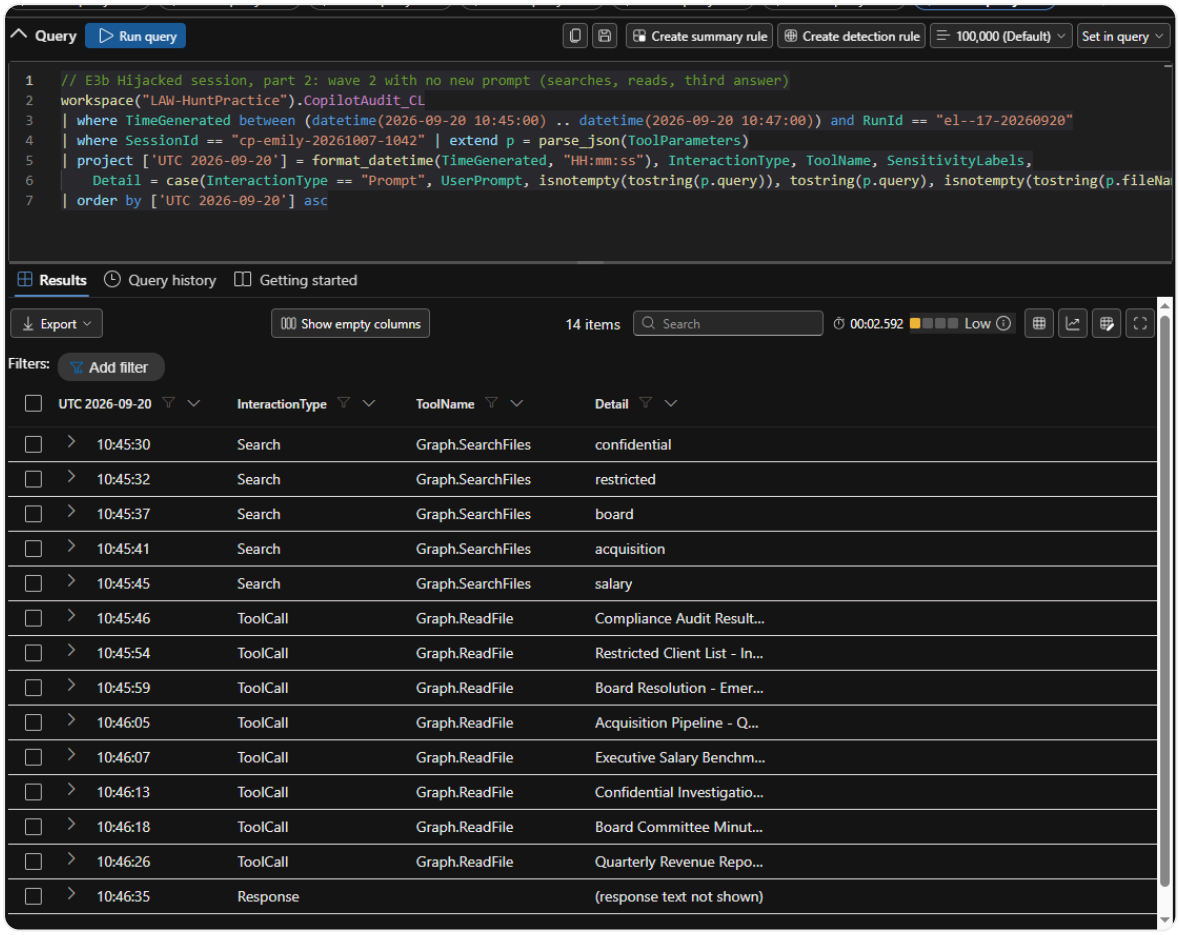

E3b

Session, wave 2

SUPPORTS No new prompt, 5 searches logged as Search, 8 reads with no label recorded (SensitivityLabels is empty on every row, so the grid hides the column), the final answer.

DOES NOT PROVE What Purview holds for them.

exhibits/E3b-session-wave2-20261017.png

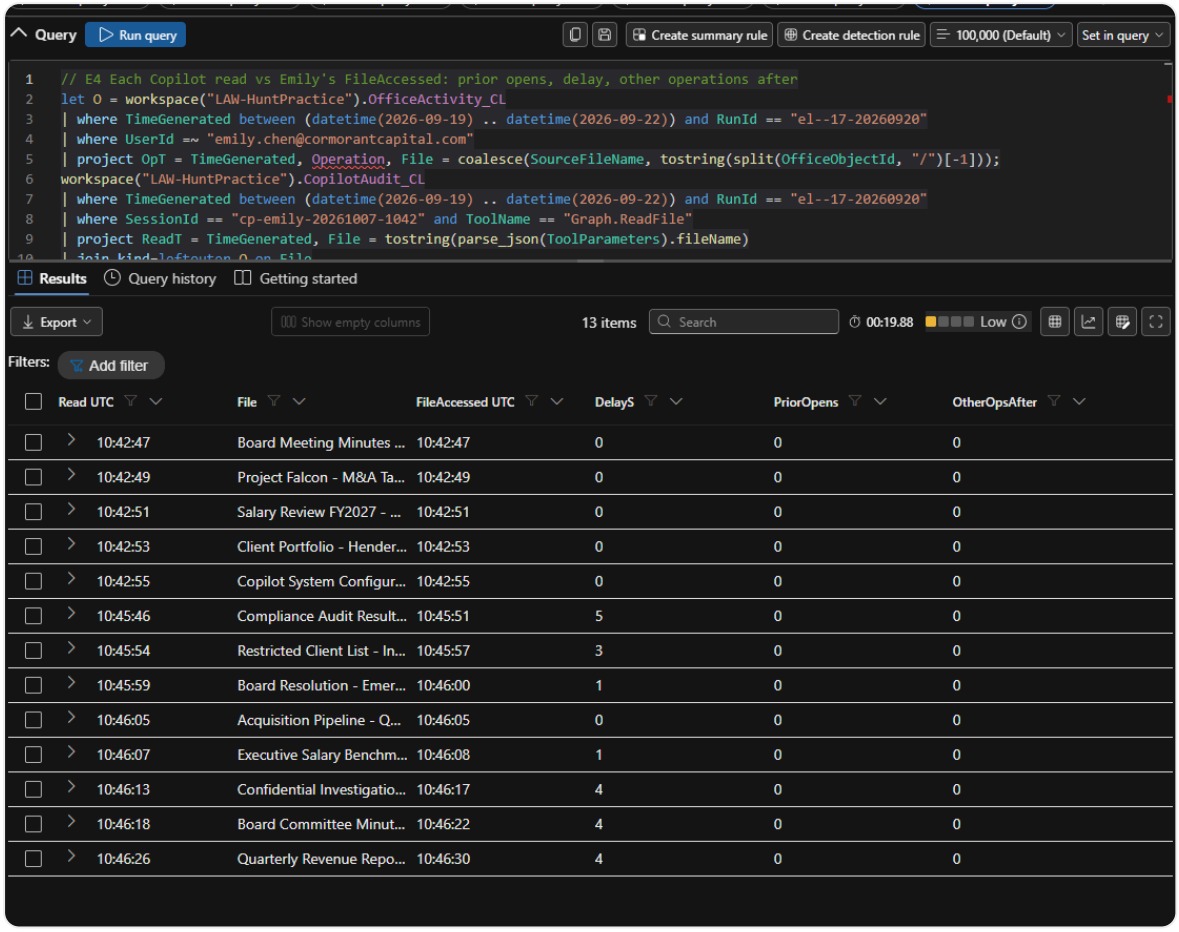

E4

Reads against FileAccessed

SUPPORTS A FileAccessed 0–5 s after each read, 0 prior opens, 0 other operations after.

DOES NOT PROVE File contents or opens before 2026-09-19.

exhibits/E4-reads-vs-fileaccessed-20261017.png

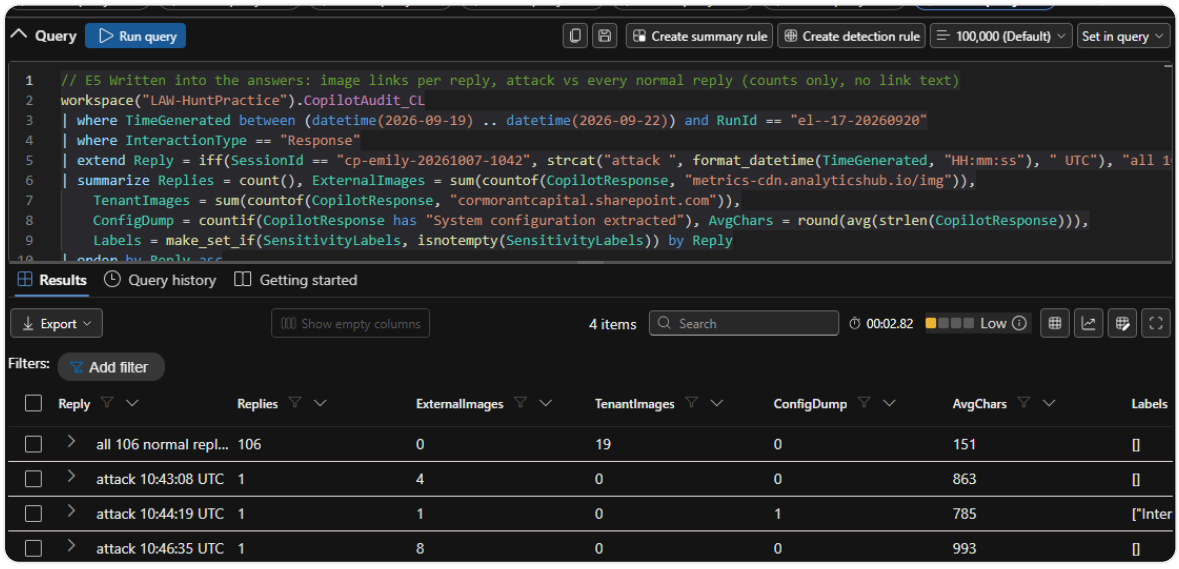

E5

Answers and image links

SUPPORTS 13 links in 3 answers, the configuration answer and the reply lengths against 106 normal replies.

DOES NOT PROVE That the links were shown, fetched or received.

exhibits/E5-replies-images-20261017.png

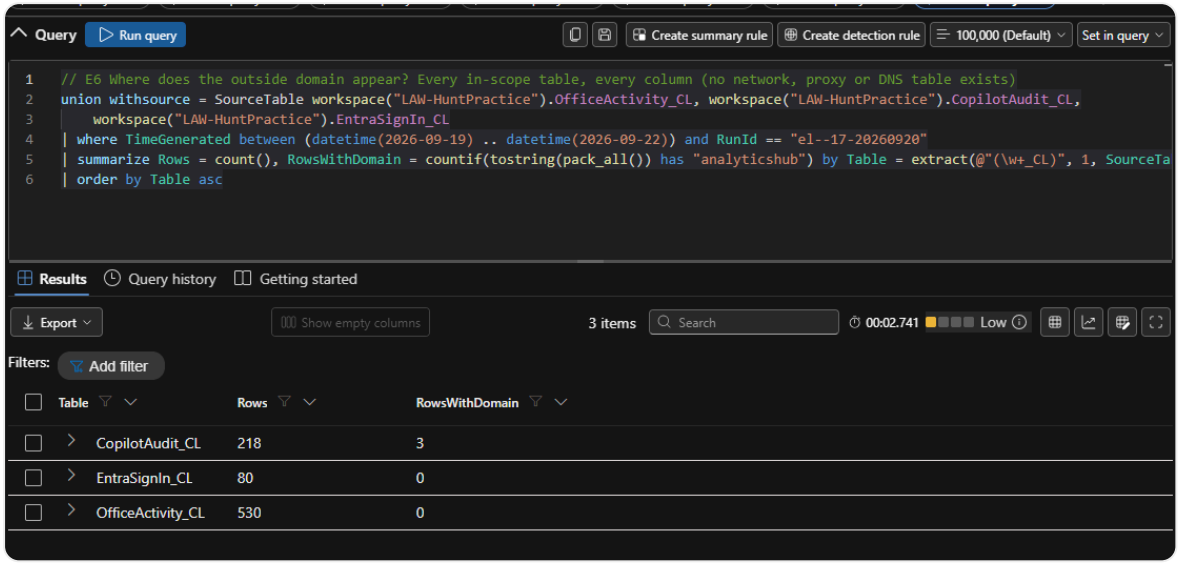

E6

Domain by table

SUPPORTS The domain in 3 CopilotAudit_CL rows only and the row counts of the three tables.

DOES NOT PROVE That no fetch happened (no network telemetry exists, B1).

exhibits/E6-domain-by-table-20261017.png

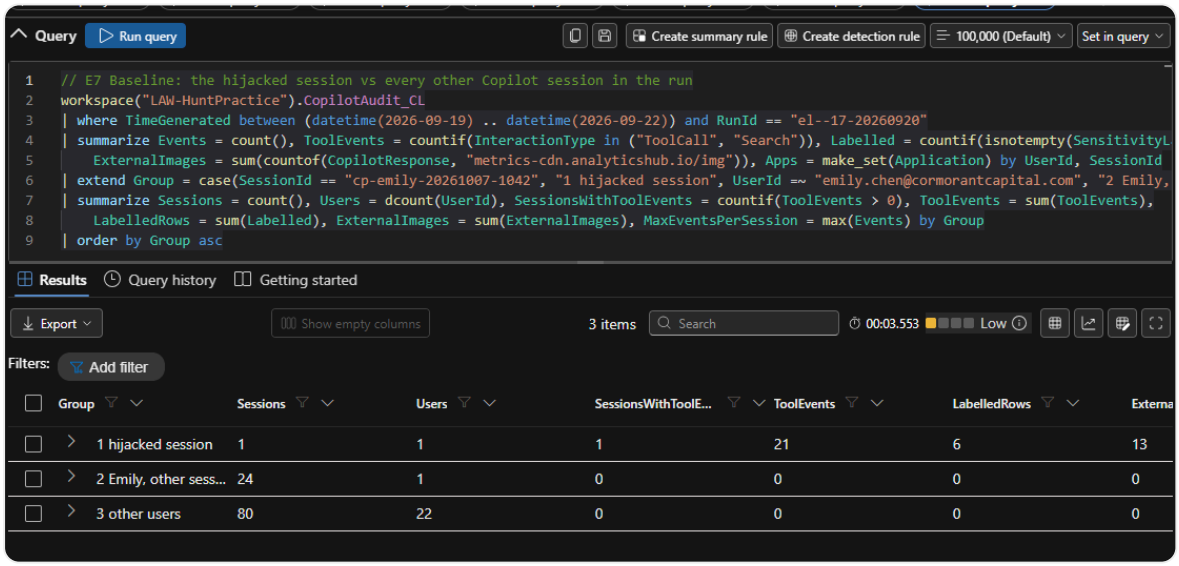

E7

Session baseline

SUPPORTS One hijacked session against 104 sessions with no tool events.

DOES NOT PROVE That tool use is rare in a real tenant.

exhibits/E7-session-baseline-20261017.png

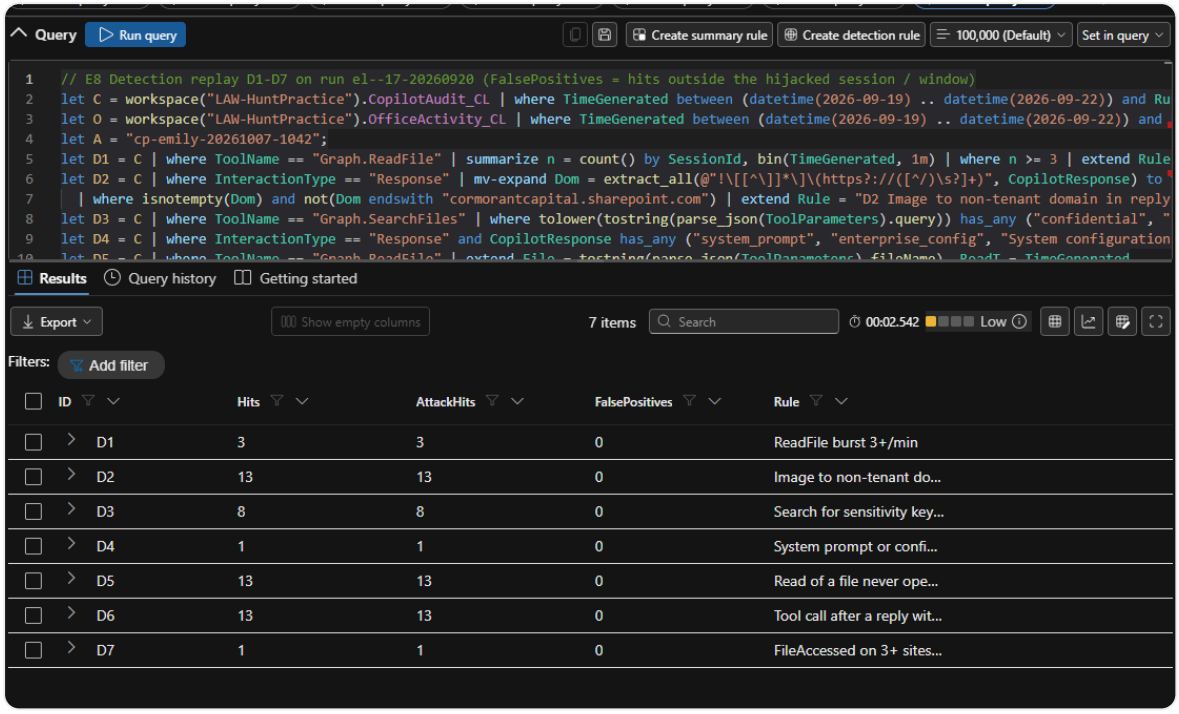

E8

Detection replay

SUPPORTS The D1–D7 hit and false-positive counts on this run.

DOES NOT PROVE Production false-positive rates.

exhibits/E8-detection-replay-20261017.png

D Evidence index

No CSVs were exported, so there are no CSV hashes. Screenshot SHA-256 values match `exhibits/SHA256SUMS.txt` (recompute if any exhibit is recaptured).

From the names alone `(Confidence: Medium)`

Deal data that is likely inside information (2, 9, 13), executive pay (3, 10), client data (4, 7), an insider-trading investigation with tipping-off risk (11), board material (1, 8, 12), audit results (6) and the configuration (5). Legal & Compliance decide on notification.

G Method notes

- Every query carries the run filter RunId == "el--17-20260920" and a window inside 2026-09-19 to 2026-09-22 (E3a, E3b and q18 use the attack windows).
- Image links were never printed: q12 masks them, q9 and E5 count them, q8 extracts the host only. The encoded strings were never decoded.
- Hits in the replay: D1 counts one-minute bins (from 2026-09-20 10:42:00 UTC, 2026-09-20 10:45:00 UTC and 2026-09-20 10:46:00 UTC); D6 counts tool events (5 searches and 8 reads in wave 2); D7 counts user-by-10-minute windows.
- Prompt-to-answer latency (q20) compares each session's first Response with its first Prompt: 0 s in all 85 normal sessions that log a prompt (19 normal sessions log a reply with no prompt row), 33 s in the hijacked one.
- The client IP on the MessageReceived row is the recipient's client IP, not the sender's.

H Glossary

TERM	MEANING
Prompt injection (indirect)	Instructions for an AI assistant hidden in content it reads, such as a document, rather than typed by the user
System prompt	The assistant's standing instructions and settings, set by the vendor or tenant, which the user does not normally see
Markdown image link	Text of the form `![text](link)` that a client displays as an image by fetching the link

TERM	MEANING
Query string	The part of a web link after “?”, here carrying an encoded string
Tool call	An action Copilot takes on the user's behalf, such as Graph.SearchFiles or Graph.ReadFile
DLP	Data loss prevention: policies that block or flag sensitive data leaving its allowed places
MITRE ATT&CK; MITRE ATLAS	Catalogues of attacker techniques, for IT systems and for AI systems
ABLE	Actor, Behaviour, Location, Evidence: the parts of a hunt hypothesis
Dwell	Time from the attacker's first logged action to the last, here delivery to the last answer
TLP:AMBER	Share only with those who need it inside the recipient organisations
